

## Site Support

In addition to our design and engineering facilities we also provide a complete site support and commissioning service. Our commissioning teams travel the world to providing support for systems that we have supplied and other manufacturers equipment

In addition to commissioning schemes our specialist knowledge in key areas such as Metal Finishing Plant management and safety systems means that we can also provide support for all types of finishing and ancillary equipment.

## Planned Maintenance.

A regular service order gives you the benefits of having Metal Finishing Plant and process equipment serviced on a regular basis without having to remember to organise it as an annual event. NR will handle all the paperwork and work; all you have to do is file the reports.

Under the GAS SAFETY (*Installation & Use*) Act 1998 Part F Section 35 & 36 and the Health and Safety at Work Act 1976/1998 it is the responsibility of the employer and his designated responsible person to ensure that all gas-fired equipment is maintained safely and regularly on an annual basis.

Our Regular Service Order conforms to this legislation and gives you the added benefit of a 24-hour breakdown service with response times typically being under 3 hours.

All service visits and costs are notified 3-4 weeks before they are due in writing.

## General information

We offer a full breakdown and fault finding service for all types of Finishing system and process equipment, gas pipe-work, ovens, control systems, burners etc.

Our response to breakdowns is normally the same day and within 2-4 hours of receiving a call for gas leaks we respond immediately with the nearest engineer

## Installation work

All NR installations are total packages carried out by our own directly employed staff who are fully trained and certified in their particular fields our operatives cover the following trades; service engineers, electricians, pipe-fitter welders

## Commissioning

We carry out the on site commissioning of all types of Metal finishing systems and process equipment for installers and manufacturers especially Coltan Engineers and Hi-Tec Spray  
We can also carry out the purging and testing of large internal gas mains issuing test certificates on successful completion.

## Spares

Due to the nature of the equipment, to conserve power, energy and costs, certain parts need servicing/replacing to keep them running at maximum efficiency as these parts do not have lifetime working limits.

By not having these parts regularly checked, you may be breaking regulation guidelines and losing valuable time and money

NR Will not only help advise spares required for your system, to minimise your breakdowns but also carry a full stock list of metal finishing plant parts, consumables and spares, all parts are on a same day/next day delivery schedule. Please phone for a full listing.
